Installation Manual	Date: 01/09/2019

Installation Manual

1. Introduction

1.1 Purpose

The purpose of this document is providing the instruction of how to install THINC-API on machine, NC Master, and desktop PC. It also provides information on how to repair and uninstall THINC-API.

1.2 Scope

This installation will cover installing THINC-API for different machine types, and desktop PC.

1.3 Definitions, Acronyms, and Abbreviations

GAC – Global Assembly Cache Windows folder located in 'C:\WINDOWS\assembly'

1.4 Overview

The THINC-API setup application will automatically detect if this installation is for Machine/NC master or desktop PC.

- The Machine/NC Master installation will install:
 - THINC-API document, and sample application using THINC-API
 - THINC-API libraries to enable building and running THINC-API application to run.
- Desktop installation will install all THINC-API libraries, sample application, help file
 - THINC-API document, and sample application using THINC-API
 - THINC-API libraries to enable building THINC-API application.

The THINC-API setup application also detects and installs the correct THINC-API library files for lathe, machining center, and grinder when installing for Machine/NC Master.

For desktop installation, all libraries can be installed altogether if needed

2. References

None

3. Requirements

The THINC-API setup application requires running under Administrator user account only. It also requires to run under Windows mode only (NC is not running). If NC is running, it requires rebooting the machine to Windows mode.

3.1 Compatibles

THINC-API must be installed on the OSP-P100II/P200 or newer OSP-P controls in order to access to machine data. It requires .NET framework 4.0 for Lathe, Machining Center and Grinder.

THINC-API has been tested on the following platforms:

- Microsoft Windows XP Professional Embedded with SP3

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

- Microsoft Windows 7 x86 with SP1

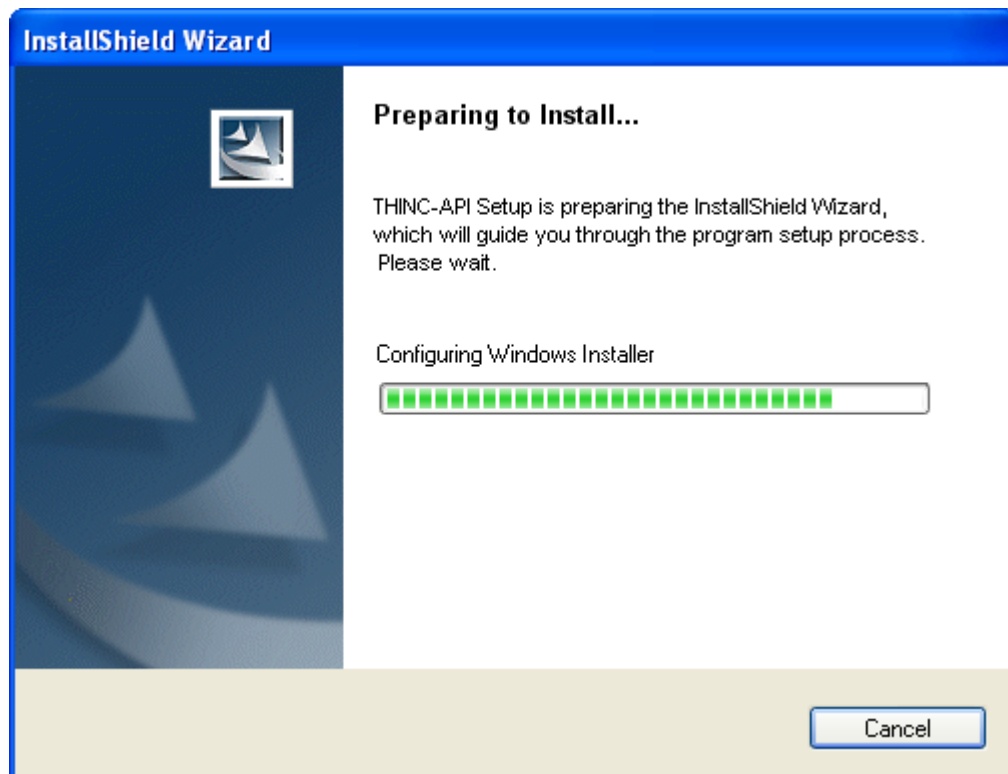

THINC-API libraries can be used with Microsoft Visual Studio 2010 or newer Visual Studio version to develop custom Windows application.

4. Installation Instruction

4.1 Machine/NC Master Installation

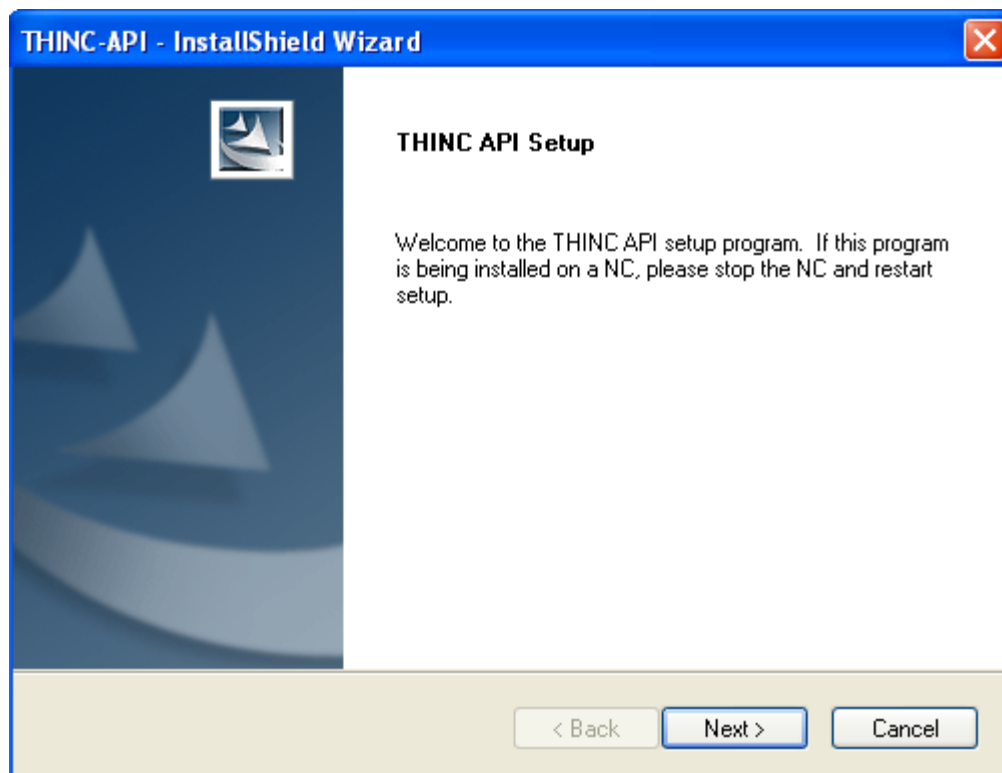

4.1.1 Run Setup

Run the THINC-API-Setup.exe program from the provided installation disk on Machine/NC Master

During this stage, the installation will evaluate OSP system file to ensure that it can support current installation. If not, the setup will generate an error message and terminate the installation.

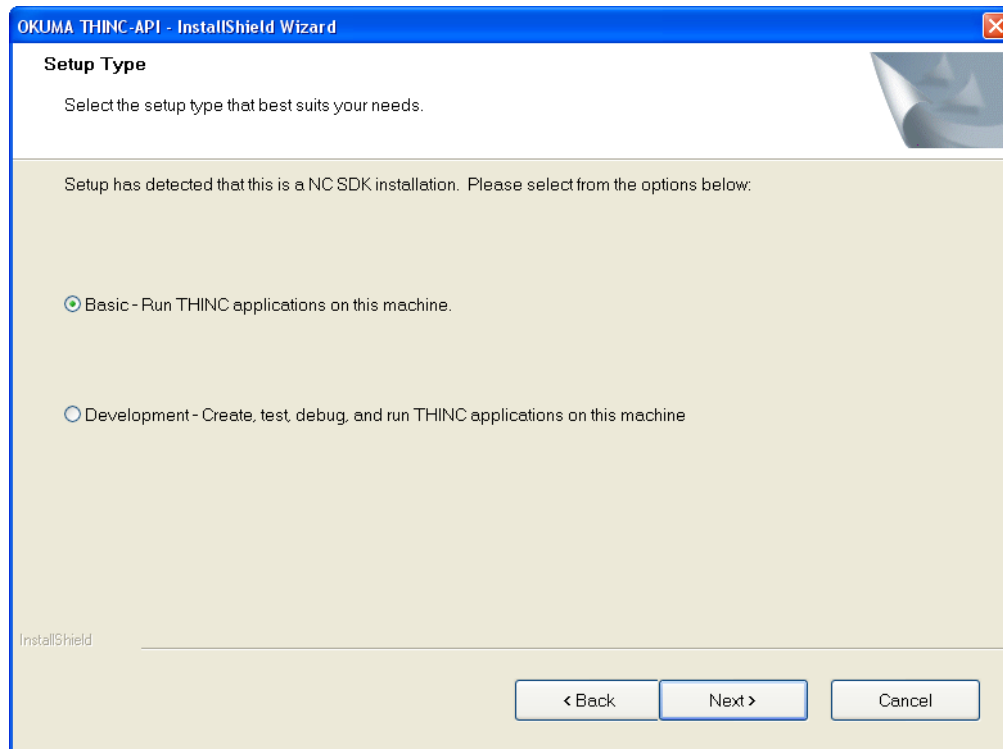

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Press Next to advance to the next page

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

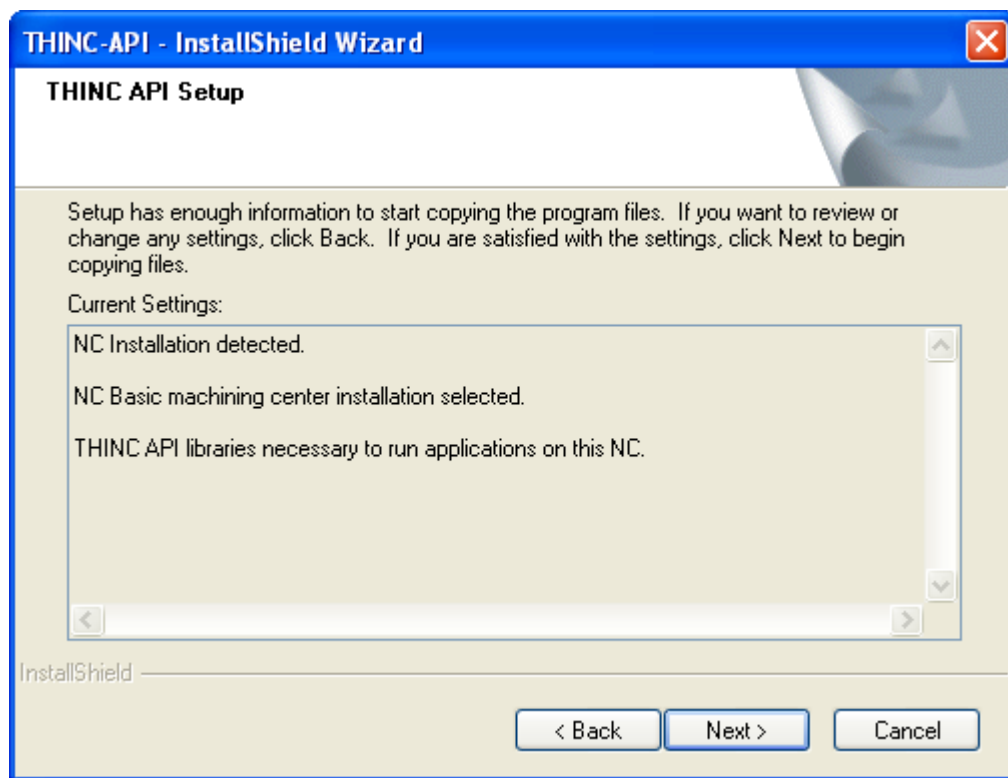

4.1.2 Setup Type

Select the appropriate option and click Next to continue with the installation process.

4.1.3 Setup

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

In this setup dialog, information on the selected options will be displayed.

Click Next to continue with the installation process or click Back to review/ change any settings.

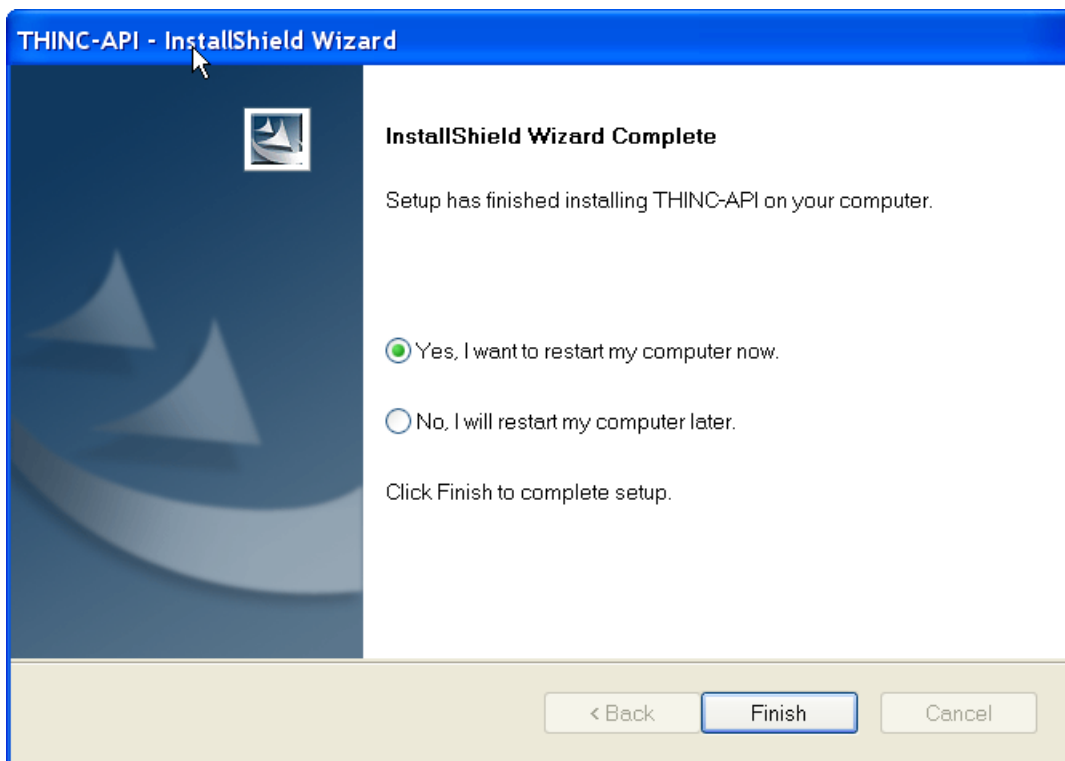

4.1.4 *Installing*

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

At any time, you can press Cancel button to terminate the installation.

4.1.5 Finish

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Click Finish to just finish the installation process.

4.2 Desktop Installation

All 3 libraries for Lathe, Machining Center, and Grinder can be installed when desktop installation is detected. The installation will consider desktop installation when there is no OSP-P folder on C drive.

All libraries and applications will be installed for each selection of machine types.

Note: An upgrade installation might not be able to install all 3 libraries if the previous version of THINC-API installed on desktop is 1.18.0.0 or older.

D drive is also required for Desktop Installation

If there is an OSP-P folder on C Drive, the installation will be installed as for machine/NC Master.

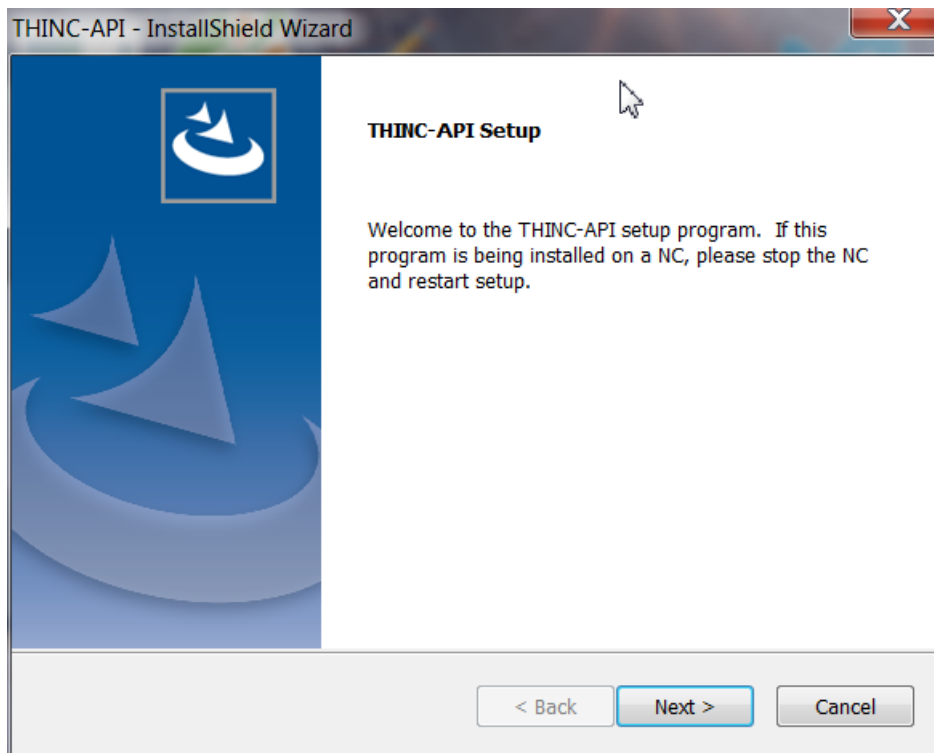

PC NC Master, a separate software package that can be purchased from OKUMA distributor, must also be installed on PC in order to run any application developed with THINC-API.

4.2.1 Run setup

Run the THINC-API-Setup.exe program from the provided installation disk on desktop PC.

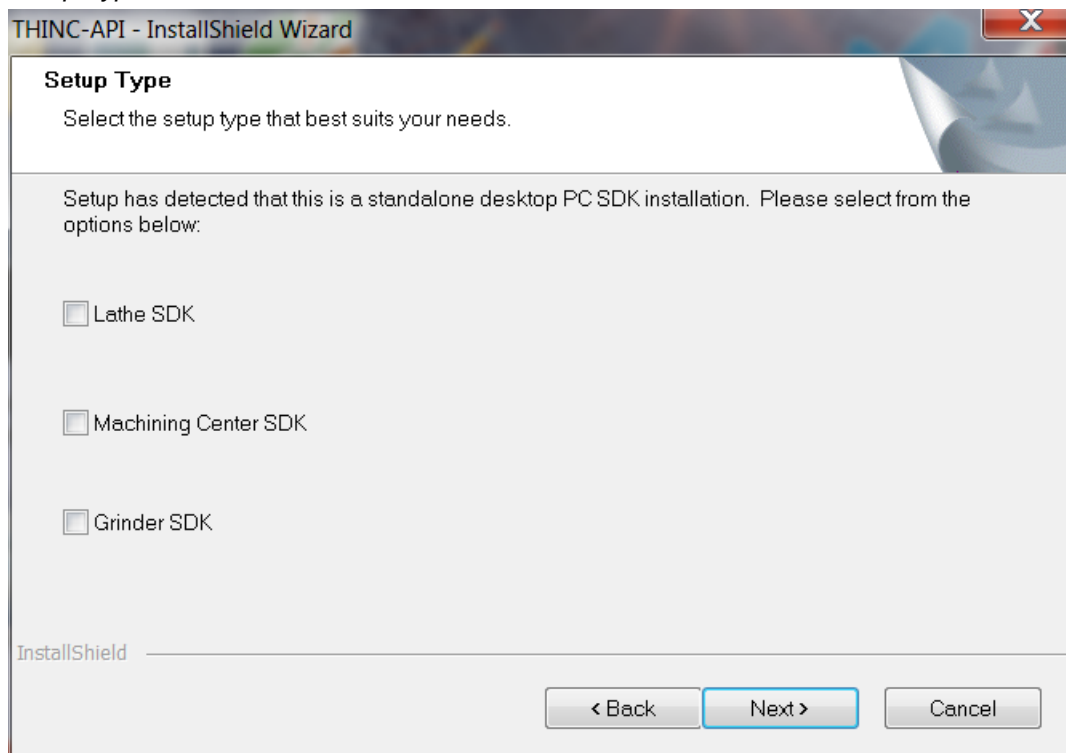

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Press Next to advance to the next page

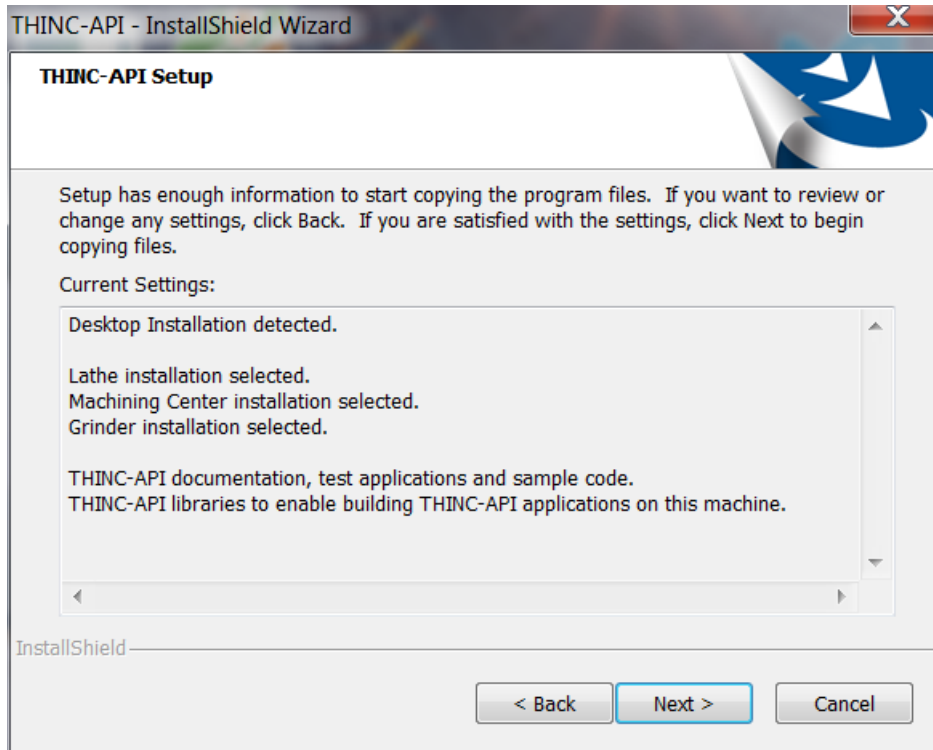

4.2.2 Setup Type

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Select the appropriate option and click Next to continue with the installation process.

4.2.3 Setup

In this setup dialog, information on the selected options will be displayed.

Click Next to continue with the installation process or click Back to review/ change any settings.

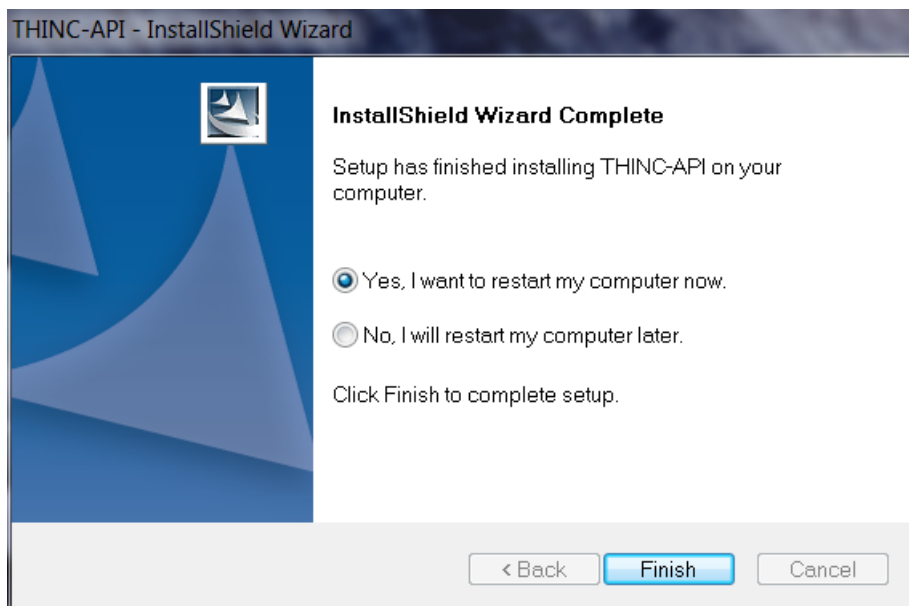

4.2.4 Installing

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

At any time, you can press Cancel button to terminate the installation.

4.2.5 Finish

Click Finish to just finish the installation process.

4.3 Upgrade Installation

If the target machine or PC already has the previous version THINC-API then the installation will enter the

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

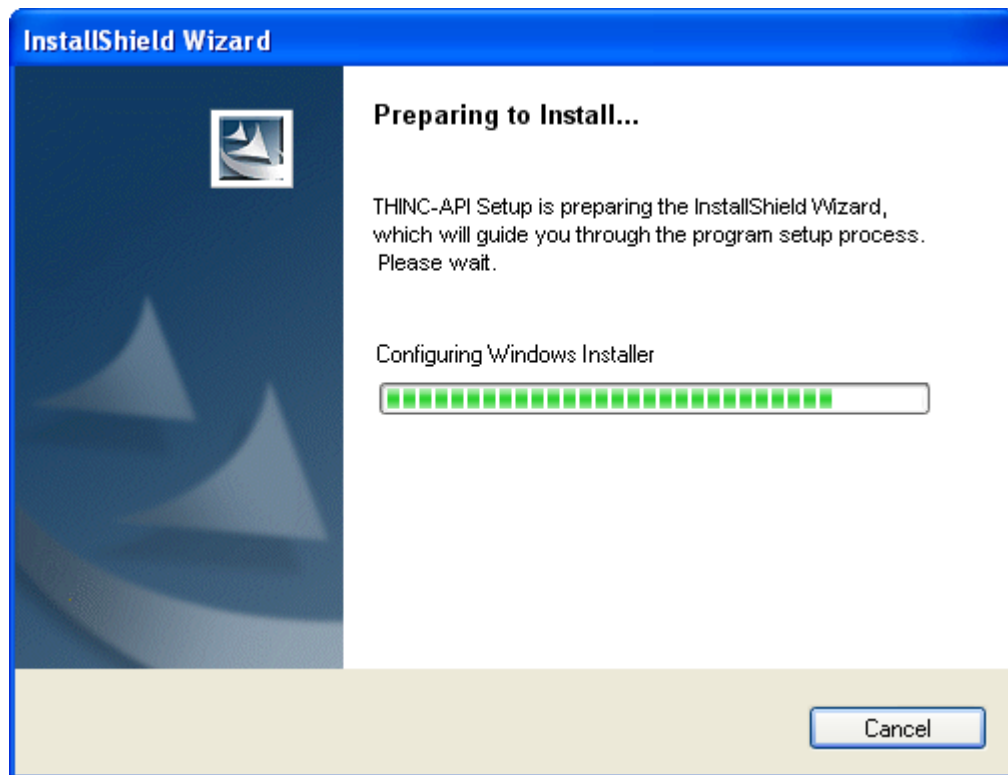

upgrade installation mode.

4.3.1 Run setup

Run the THINC-API-Setup.exe program from the provided installation disk on Machine/NC Master

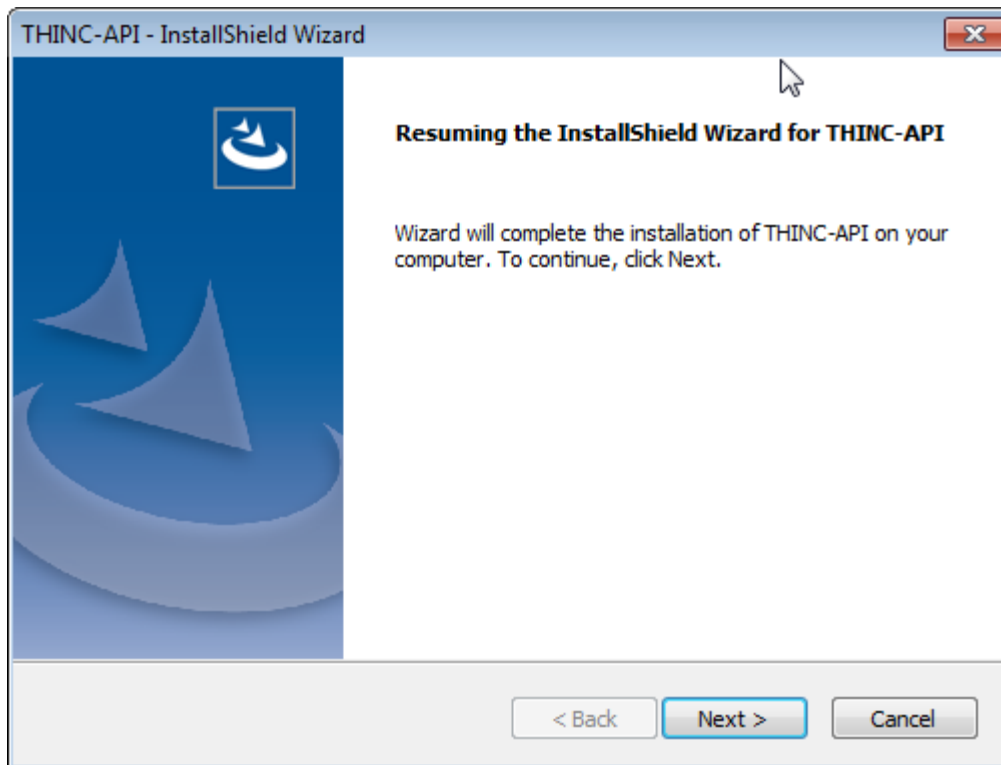

Click “Yes” button to perform upgrade THINC-API to the newer version

During this stage, the installation will evaluate OSP system file to ensure that it can support current installation. If not, the setup will generate an error message and terminate the installation.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Press Next to advance to the next page

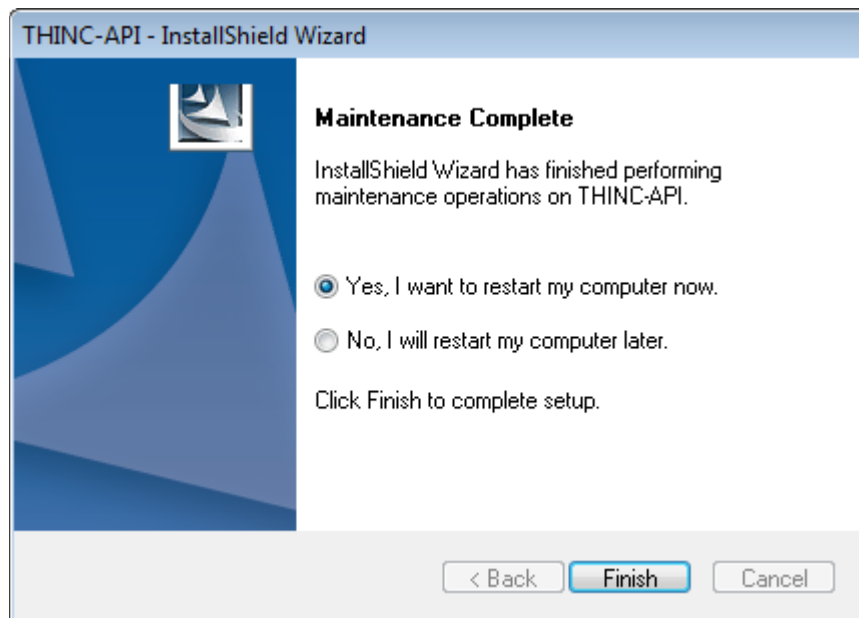

4.3.2 Installing

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

At any time, you can press Cancel button to terminate the installation.

4.3.3 Finish

Click Finish to just complete the installation process.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

4.4 Install License file

When THINC-API Setup program runs it will install either demo or permanent license version (Okuma.api.lic).

It is best to obtain the license file that supports the latest release of THINC-API libraries version although your application only requires an older THINC-API version.

License file can also manually copy to the D:\Program files\Okuma\License folder.

By default, the current version of installation will always copy the license file included with the Setup to the destination folder.

Note: Each Public Release of THINC-API always has a license file that supports the latest version of all THINC libraries. All applications developed with THINC-API use the same license file as long as THINC-API library version that your application compiled with is less than or equal to library version in the license file.

4.5 Validate Installation

4.5.1 THINC-API Libraries

For machine/NC Master installation, the test sample application can be run to ensure that THINC-API libraries can be supported under current machine configuration. By design, THINC-API libraries are tightly integrated with NC OSP System software. Therefore, a certain file version of NC OSP System files must be met in order to support all functions in the libraries.

Note: Per function call in the libraries also depends on machine options, spec. code, NC Control software version etc...

4.5.1.1 Run THINC sample application

Based on OSP Software System files, the Setup program will only install the appropriate libraries. It will install either Lathe/Machining Center/Grinder libraries.

Using Windows Explore to navigate to D drive and subfolder:

Lathe: D:\Program Files\Okuma\THINC API\ThincLathe\bin

MC: D:\Program Files\Okuma\THINC API\ThincMC\bin

Grinder: D:\Program Files\Okuma\THINC API\ThincMC\bin

Run THINC sample application by double clicking on ThincLathe.exe, ThincMC.exe, and ThincGrinderApp.exe for Lathe/Machining Center/Grinder, respectively.

4.5.1.2 Validation

4.5.1.2.1 THINC-API Sample Applications

If current OSP System software can support current version of THINC-API libraries installed on machine, a Windows Form should be displayed without any error message as shown:

Note: Per function call in the libraries also depends on machine options, spec. code, NC Control software version etc...

Installation Manual	Date: 01/09/2019

4.5.1.2.2 THINC-API Notifier

There is a Windows Service called 'Okuma API Notifier' which will be installed on machine, NC Master, and desktop PC. It indicates the status of THINC-API as an icon in the system taskbar.

There are 4 states of THINC-API Notifier as shown below:

1/ Waiting State (API white-background icon) – NC is not running yet. THINC-API is not initialized yet.

2/ Initializing state (API Yellow-background icon) – NC is started and THINC-API is initializing.

3/ Initialized (API Green-background icon) – THINC-API is successfully initialized with NC and is ready for exchanging data.

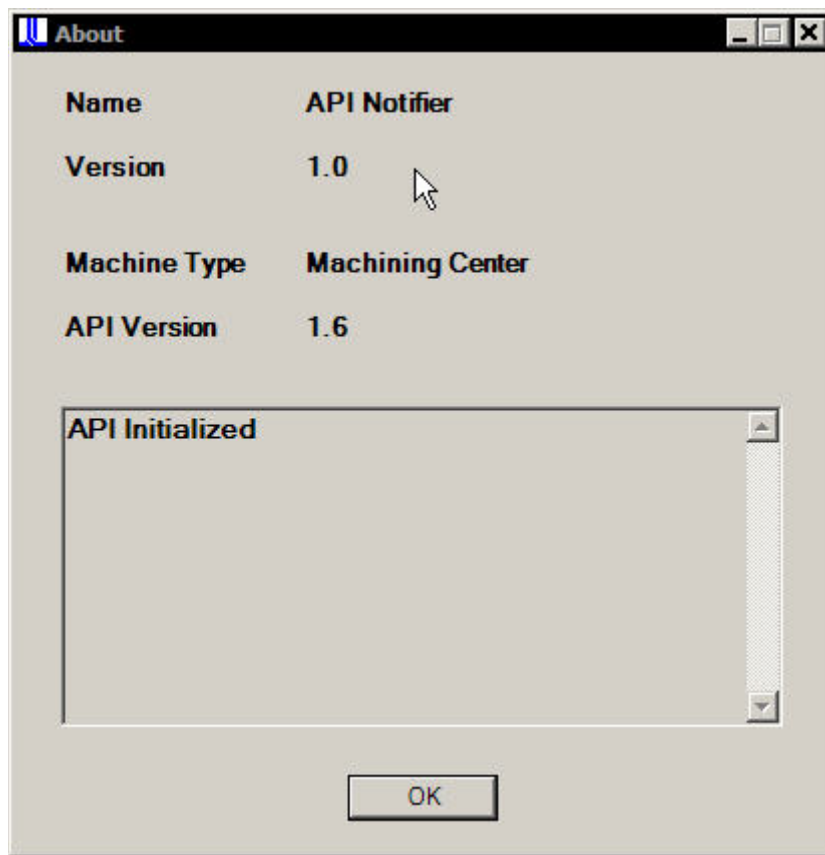

4/ Failed to initialize (API red-background icon) – NC is started and THINC-API cannot communicate with NC due to some reasons.

By clicking on the icon, it will bring up a dialog and shows status of THINC-API with message, for example:

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

4.5.1.3 Errors

4.5.1.3.1 NC Not Running

4.5.1.3.1.1 DATA-API

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

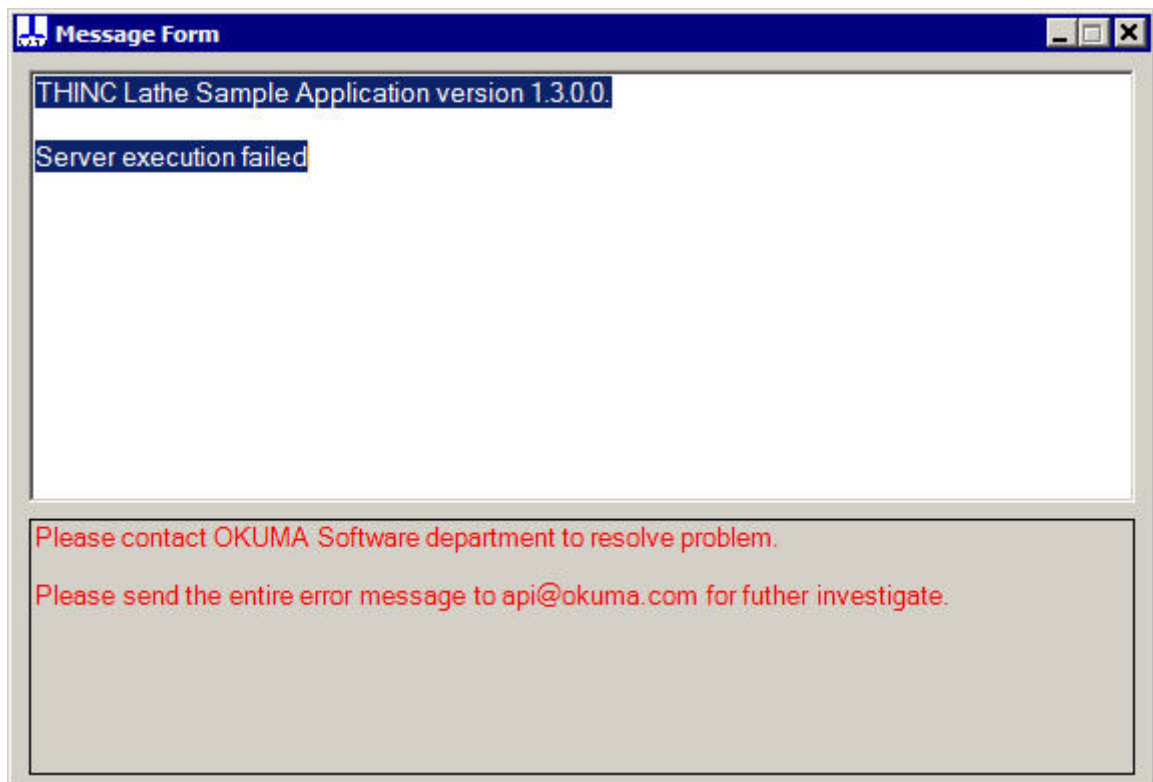

Problem: THINC-API libraries fail to initialize due to NC running condition.

Solution: Start application developed with THINC-API libraries after NC is running.
Custom applications can utilize 'Startup Service' developed by OKUMA to ensure that your custom application starts after NC started.

4.5.1.3.1.2 Command API

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Problem: THINC-API libraries fail to initialize due to NC running condition.

Solution: Start application developed with THINC-API libraries after NC is running.
Custom applications can utilize 'Startup Service' developed by OKUMA to ensure that your custom application starts after NC started.

4.5.1.3.2 THINC-API dependency library files

THINC-API will check the following files in NC OSP system software for the same or greater file version.

For Lathe:

LDATAPI.dll
LCMDAPI.exe
Softswitch.exe

For MC:

MDATAPI.dll
MCMDAPI.exe
Softswitch.exe

For Grinder:

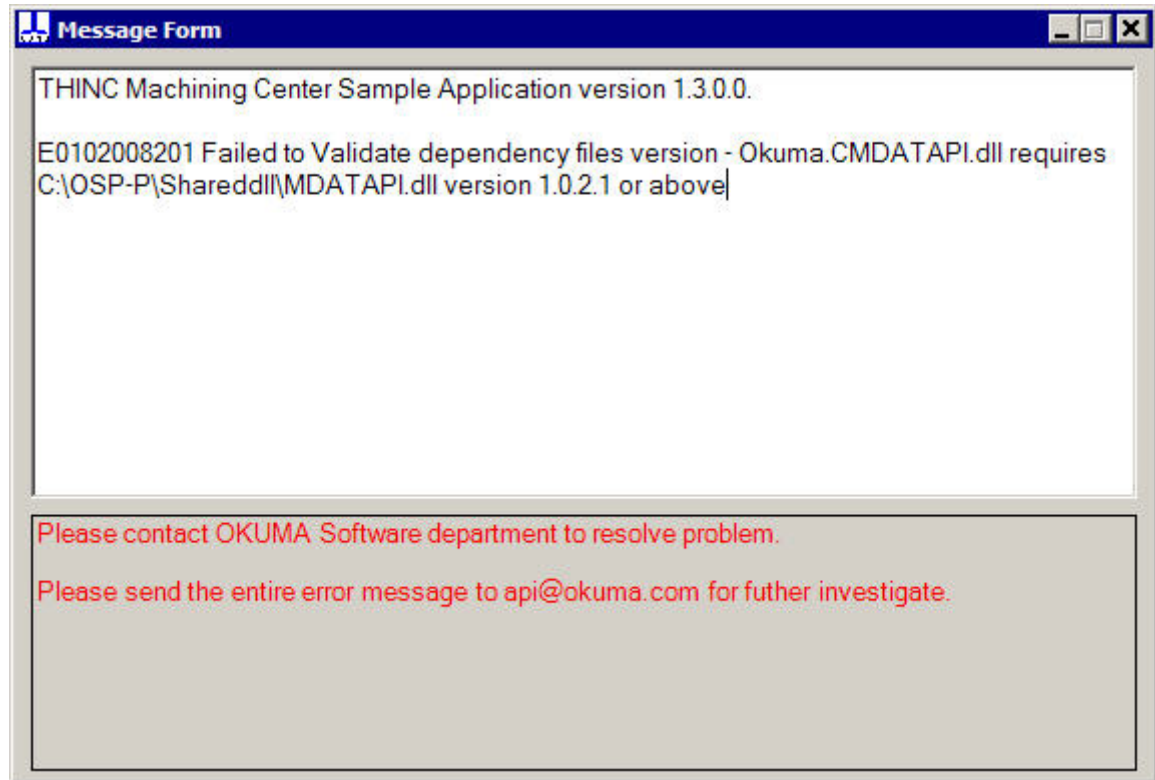

GDATAPI.dll
GCMDAPI.exe
Softswitch.exe

And PIODLIB.dll library

4.5.1.3.2.1 Incorrect file version

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

For any reason if the above files listed for Lathe/MC have incorrect file version, a dialog box will display and show the error message of what causing THINC-API sample application fails to run correctly.

The error message shows an incorrect file version:

- Operation: Failed to Validate dependency files version
- Problem: Okuma.CMDATAPI.dll requires C:\OSP-P\SharedDll\MDATAPI.dll version 1.0.2.1 or above.

Solution: Re-Install/Install THINC-API again if any of the above file listed for Lathe/MC has incorrect file version.

4.5.1.3.2.2 Missing Dependency files

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

The error message shows a missing file:

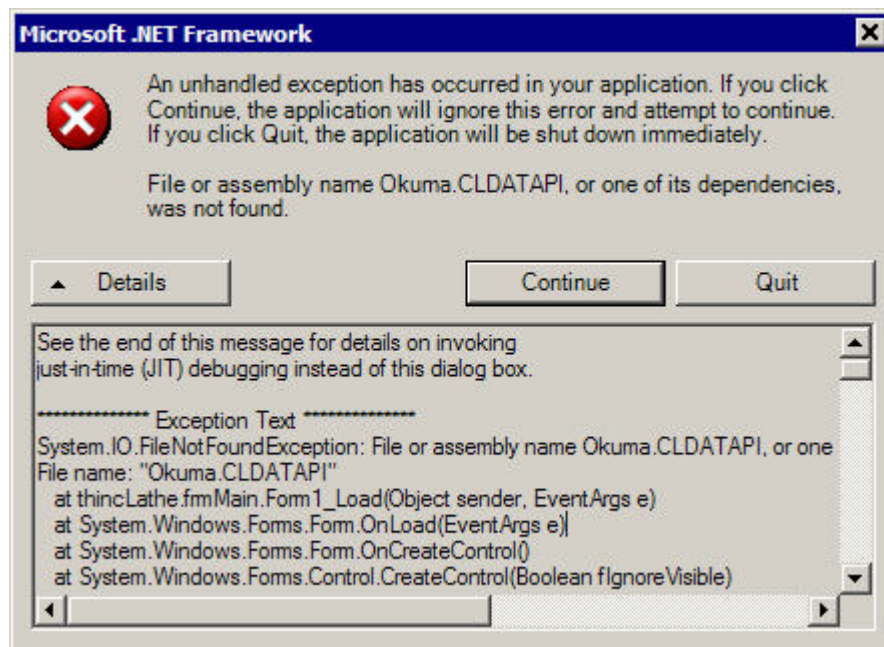

- Operation: Failed to Validate dependency files version
- Problem: Okuma.CMDATAPI.dll requires C:\OSP-P\SharedDll\MDATAPI.dll file.

Solution: If any of the above files listed for Lathe/MC are missing, then an installation of THINC-API to the latest version is needed.

4.5.1.3.3 THINC-API library files

4.5.1.3.3.1 Missing library file

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

All applications developed with .NET THINC-API libraries are required to include an exact version of THINC-API libraries with the custom installation. THINC-API libraries compiled with application should be installed with your application folder.

The above error message shows that THINC-API library named Okuma.CLDATAPI.dll cannot be found at the folder where the application runs from.

Solution: Include THINC-API libraries compiled in your application with your custom setup and re-install your application with new setup.

4.5.1.3.3.2 *Incorrect library file version*

Problem: THINC-API libraries fail to load due to incorrect library version.

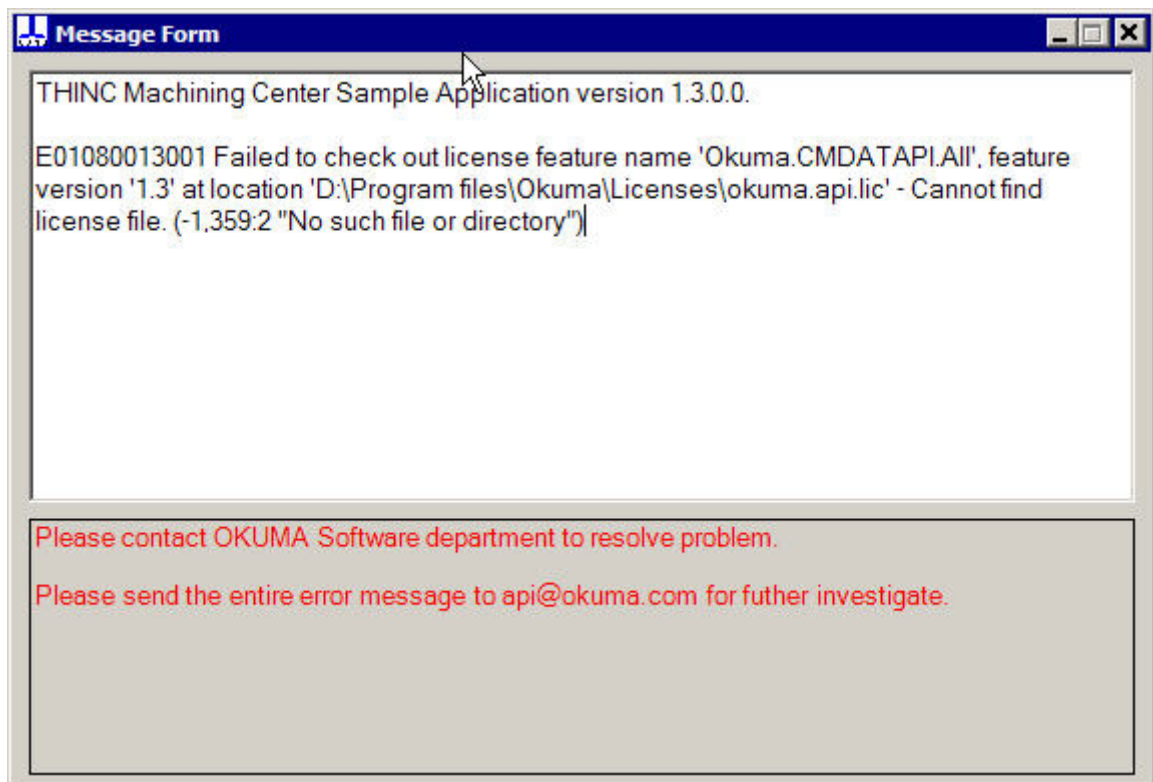

Solution: All custom applications developed with THINC-API libraries must install THINC-API libraries in the application's installation folder and must have the same file version as the libraries version compiled with.

4.5.1.3.4 License file

At first run, THINC-API will validate its license file named Okuma.api.lic located in D:\Program Files\Okuma\Licenses folder for correct version per THINC-API library file.

4.5.1.3.4.1 *Missing license file*

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

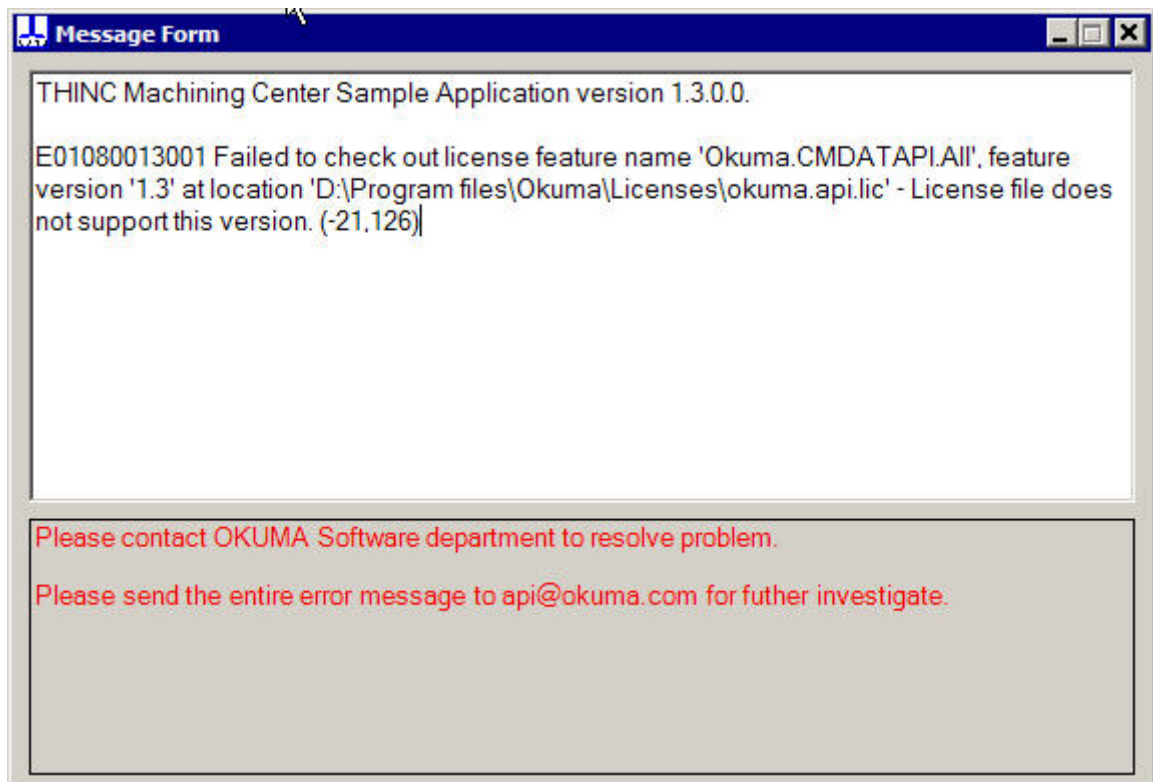

The error message shows a missing file:

- Operation: Failed to check out license feature name 'Okuma.CMDATAPI.All' feature version '1.3' at location 'D:\Program files\Okuma\Licenses\okuma.api.lic'
- Problem: Cannot find license file (-1, 359:2 "No such file or directory")

Solution: If the license is missing, then an installation of THINC-API to the latest version is needed.

4.5.1.3.4.2 Incorrect license file version

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

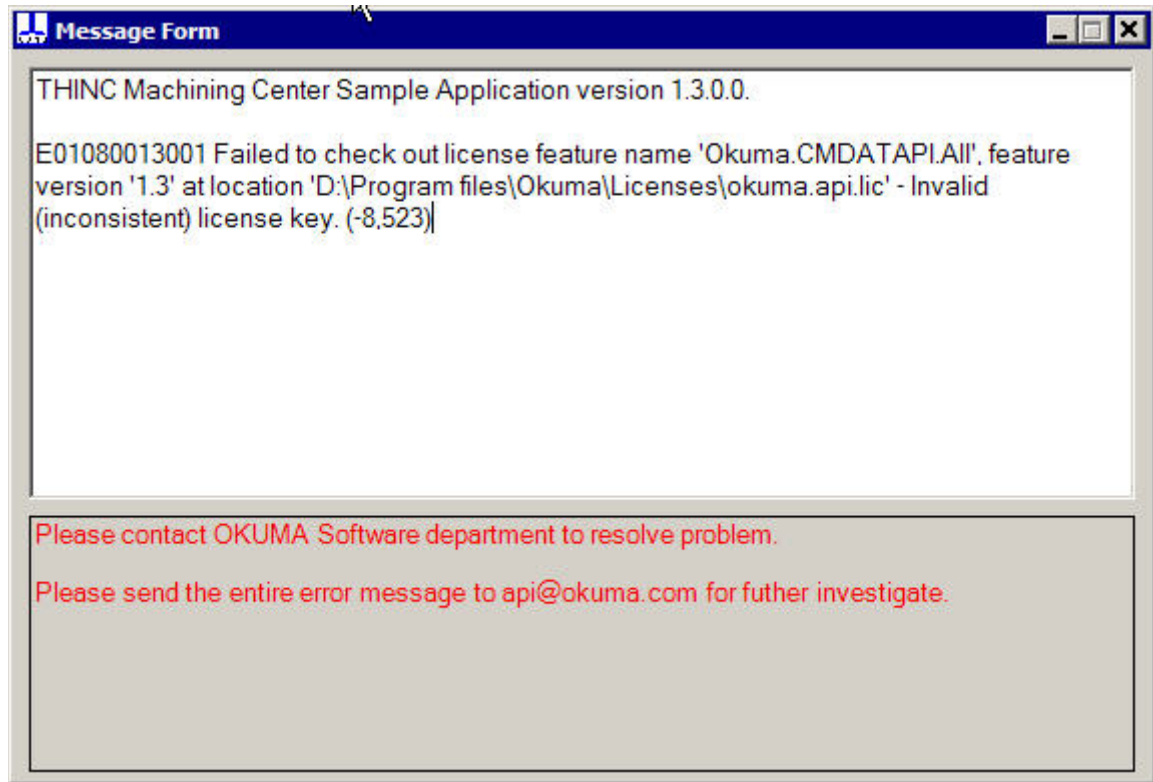

The error message shows an incorrect license version for a particular THINC-API library:

- Operation: Failed to check out license feature name 'Okuma.CMDATAPI.All' feature version '1.3' at location 'D:\Program files\Okuma\Licenses\okuma.api.lic'
- Problem: License file does not support this version. (-21, 126)

Solution: Installation of THINC-API to the latest version is needed.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

4.5.1.3.4.3 Invalid license file

The error message shows an invalid license file for a particular THINC-API library:

- Operation: E01080013001 Failed to check out license feature name 'Okuma.CMDATAPI.All', feature version '1.3' at location 'D:\Program files\Okuma\Licenses\okuma.api.lic'
- Problem: Invalid (inconsistent) license key. (-8,523). Probably, the license file has been modified.

Solution: Un-install current version and install THINC-API to the latest version.

4.5.1.3.4.4 Expired license file

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

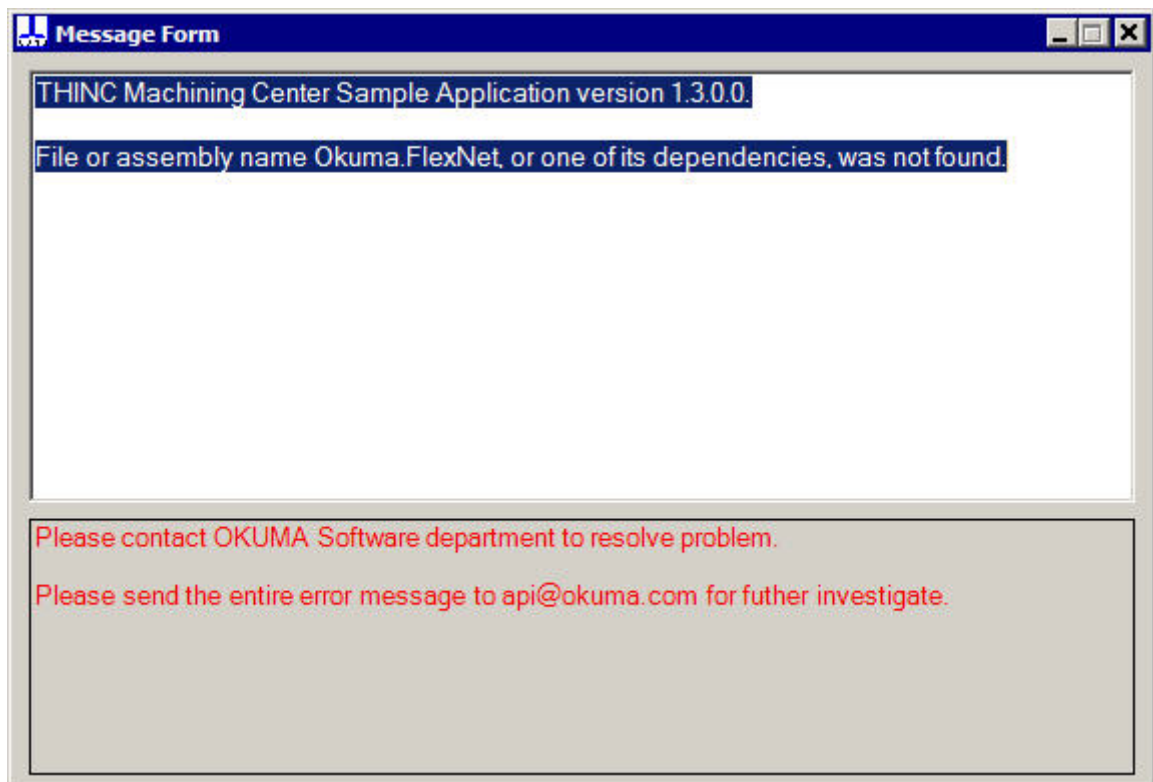

The error message shows an expired license file for a particular THINC-API library:

- Operation: E01080013001 Failed to check out license feature name 'Okuma.CLDATAPI.All', feature version '1.3' at location 'D:\Program files\Okuma\Licenses\okuma.api.lic'
- Problem: Feature has expired (-10,32)

Solution: Install THINC-API to the latest version with permanent license file. Please see section '4.3 Install External License file' for installing external license file.

4.5.1.3.4.5 Flexnet License library

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

The error message shows that a dependency library for THINC-API library cannot find in GAC (Global Assembly Cached (\Windows\assembly) folder:

- Problem: File or assembly name Okuma.FlexNet, or one of its dependencies, was not found.

Solution: Install THINC-API to the latest version.

4.5.2 *Logging Service & Logging Service Client Application*

4.5.2.1 Logging Service

At first run, THINC-API libraries will connect with Logging Service utility.

The Logging Service could fail to load correctly as indicated below:

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

The error message shows a missing file:

- Operation: Failed to load Logging Service
- Problem: Failed to locate database file at D:\Program Files\Okuma\LoggingService\log.fdb

Solution: Re-install or install THINC-API libraries to the latest version.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

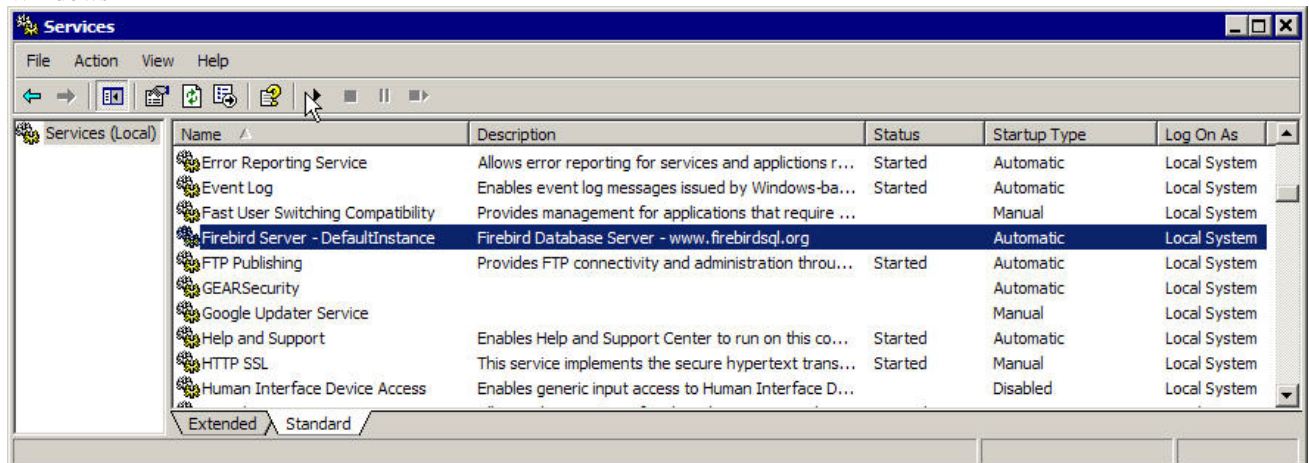

The error message shows that the Logging Service server is not running on the local machine (localhost):

- Operation: Failed to load Logging Service
- Problem: ApiLog.initConnection: Unable to complete network request to host “localhost”

Solution:

Make sure that FireBird server status is running. If not, start the FireBird server from Service Windows

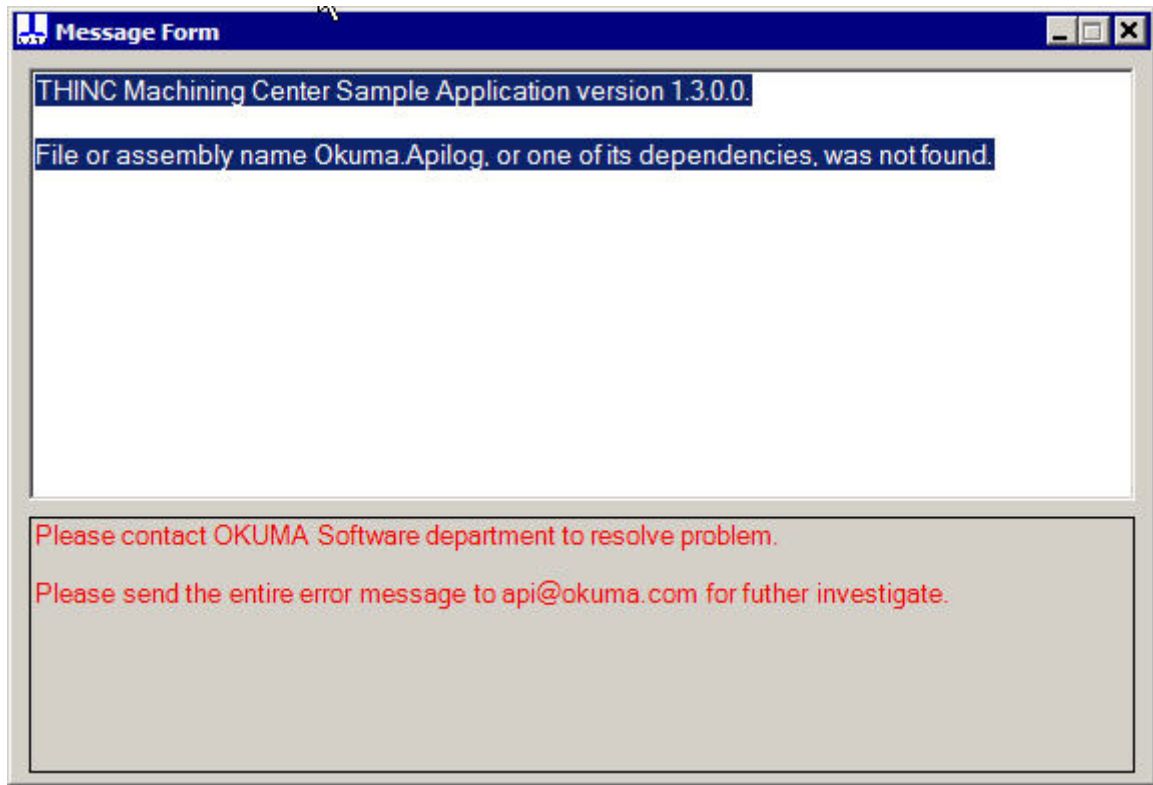

Or

Re-install or install THINC-API libraries to the latest version.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

4.5.2.2 Logging Library

The error message shows that a dependency library for THINC-API library cannot find in GAC (Global Assembly Cached \Windows\assembly) folder:

- Problem: File or assembly name Okuma.ApiLog or one of its dependencies, was not found.

Solution: Install THINC-API to the latest version.

4.5.2.3 Logging Service Client Application

The Logging Client application is a utility that allows one to view all logging records logged by THINC-API libraries at different logging level.

A successful loading of LoggingServiceClient application is shown below:

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

LoggingServiceClient application could fail to load up correctly if the logging database file is missing or Logging Service does not start yet.

Please refer to section 4.4.2.1 and 4.4.2.2 for correcting the problems.

4.5.2.4 Logging Service for .NET Framework 4.0 THINC-API libraries

THINC-API libraries compiled with .NET Framework will not use Okuma.ApiLog.dll library any more. It will use Okuma.ApiLog2.dll instead.

The following libraries and application are used for logging service and installed in D:\Program files\Okuma\LoggingService2 folder:

Okuma.Api.LogService.WinHost.exe

Okuma.Api.LogService.dll

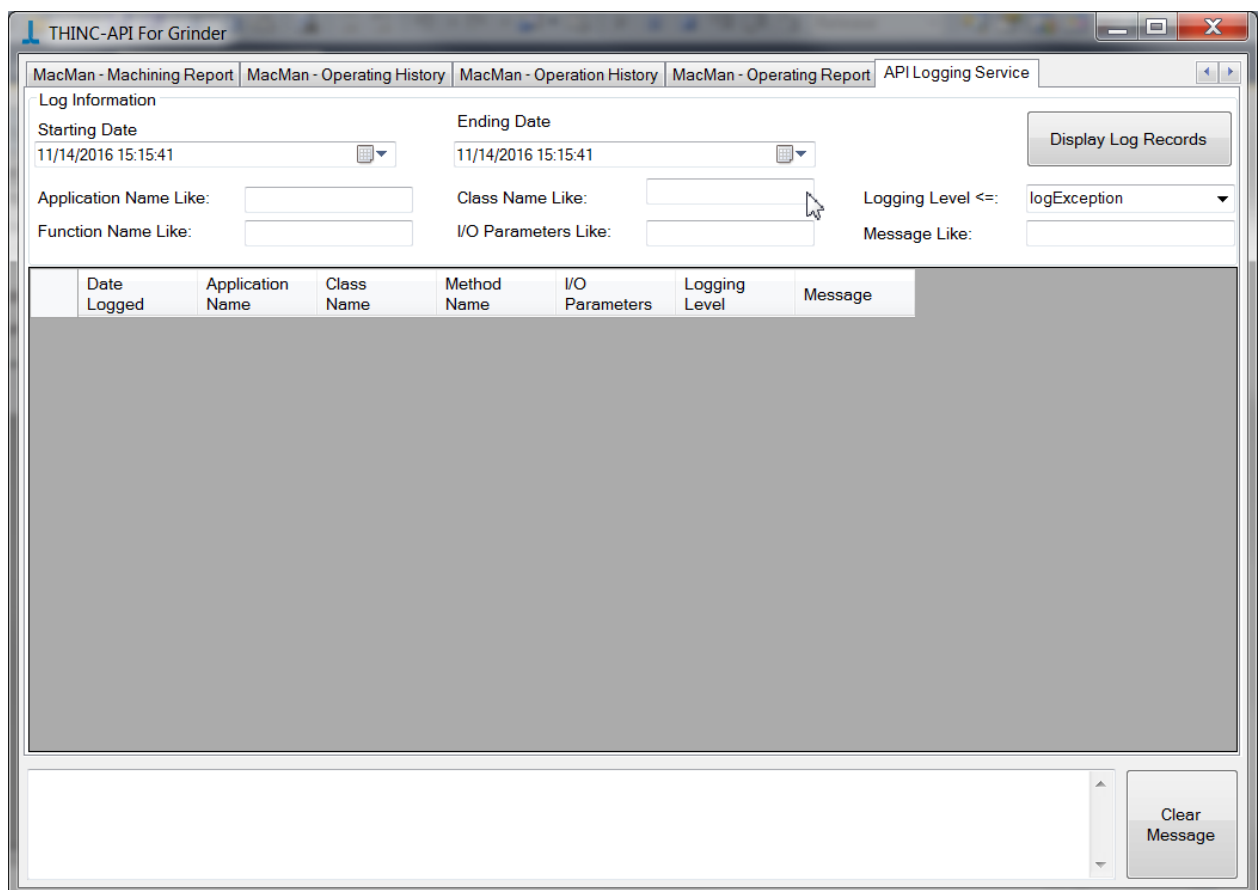

System.Data.SQLite.dll

ApiLog2

5. Repair/Uninstall THINC-API

5.1 Repair/Un-install

If THINC-API already installed, the setup will ask for either Repair or Remove the current THINC-API installation.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

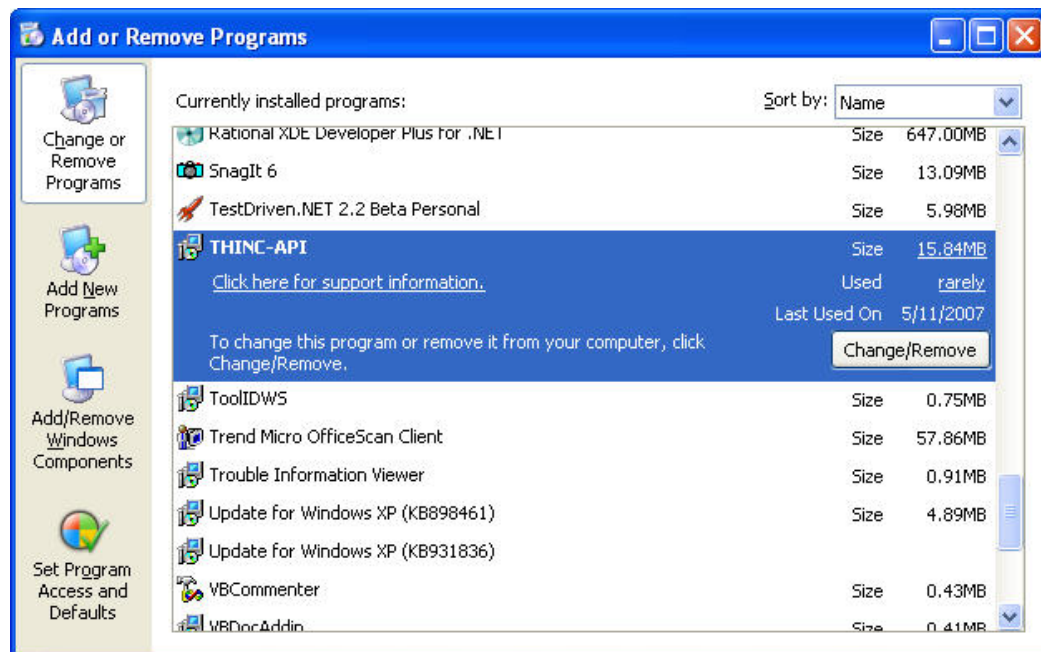

5.1.1 Repair

The setup will try to re-install all files current being installed on machine.

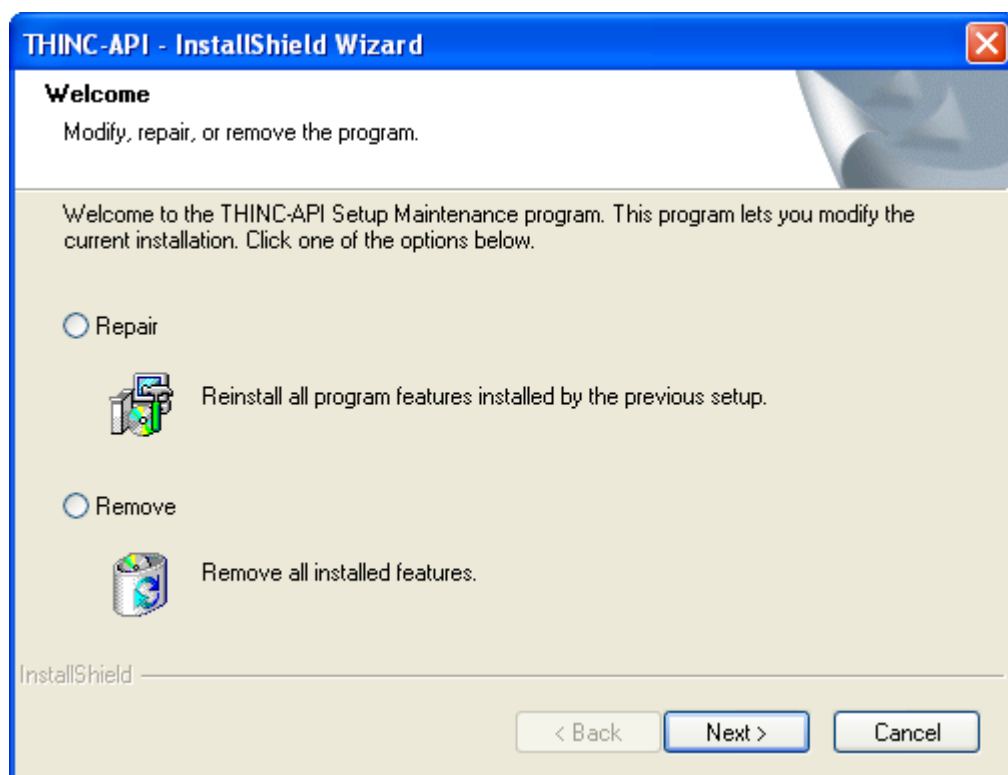

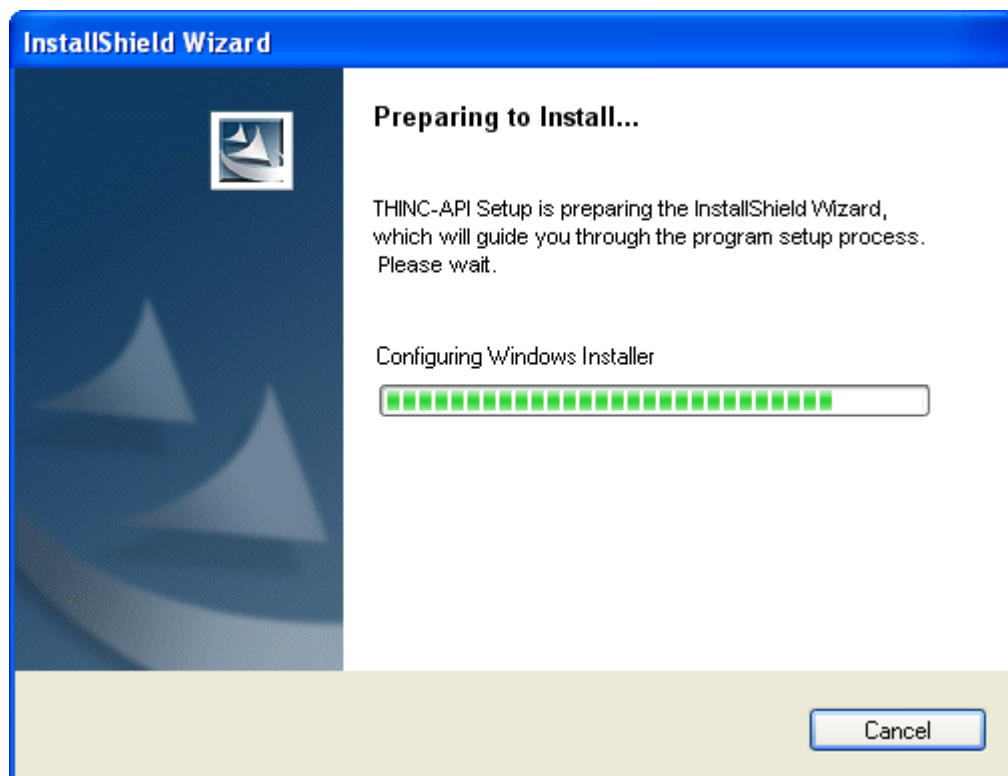

5.1.1.1 Run Setup

Run the THINC-API from Add or Remove Programs or source of media

Note: The original source of THINC-API setup must be available and accessible from Windows drive.

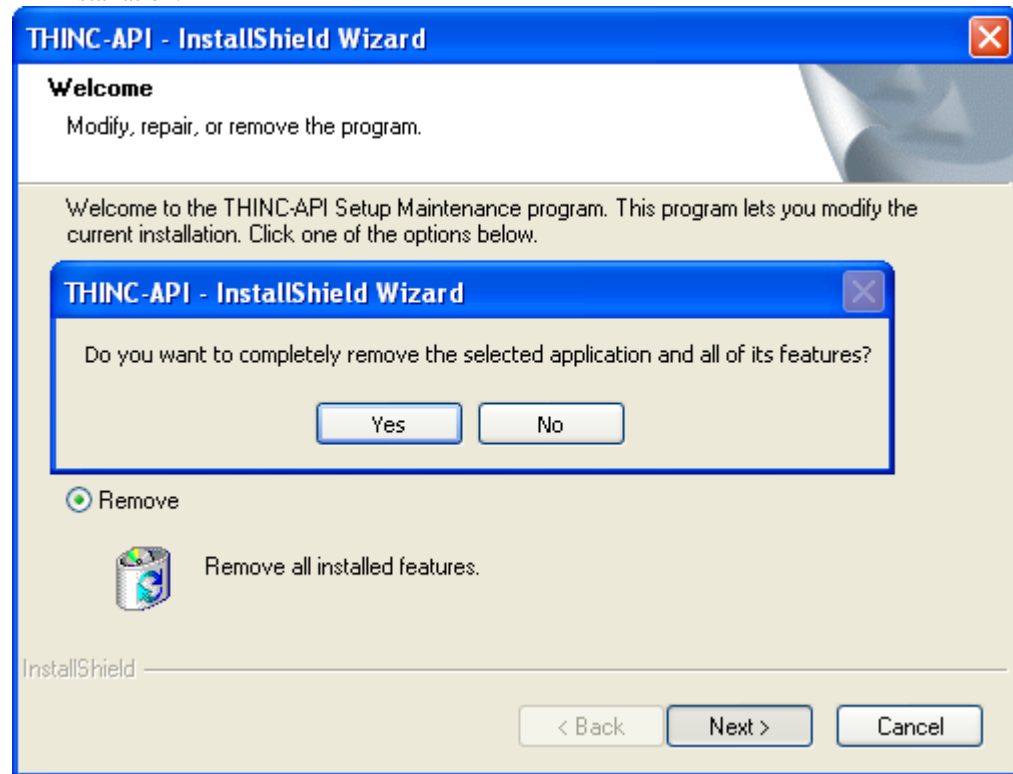

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Select the “Repair” option and press Next to continue the process

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

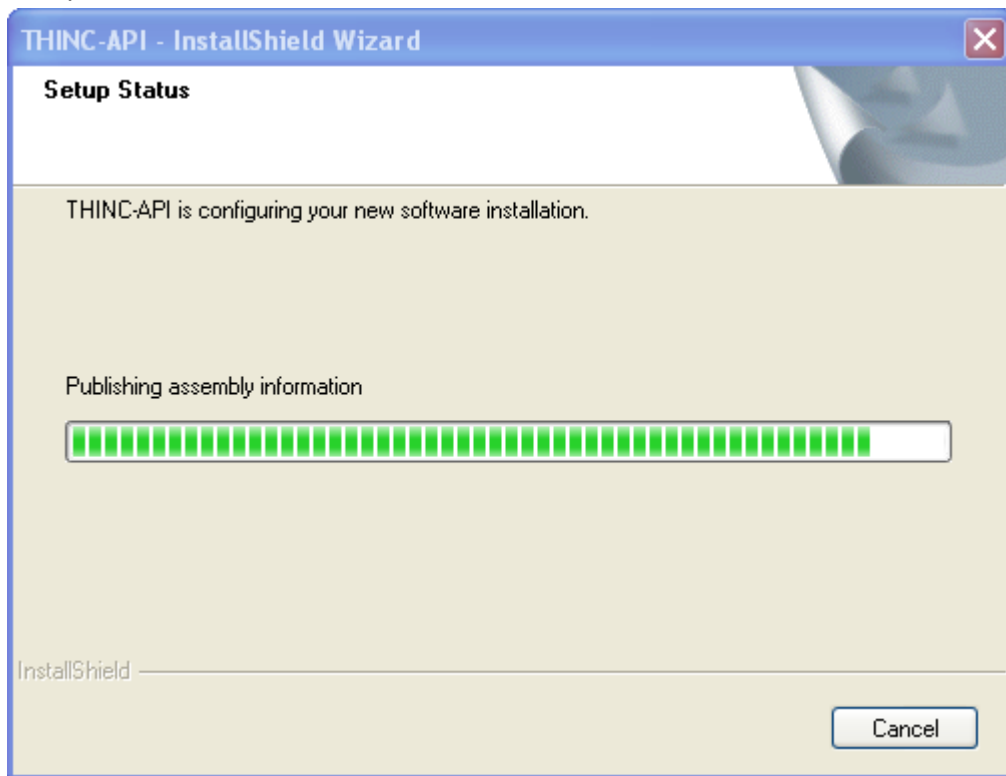

If you select 'Remove' and press Next, the installation will ask for your confirmation to remove current THINC-API installation.

Click Yes to continue with the installation process or click No to review/change any settings.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

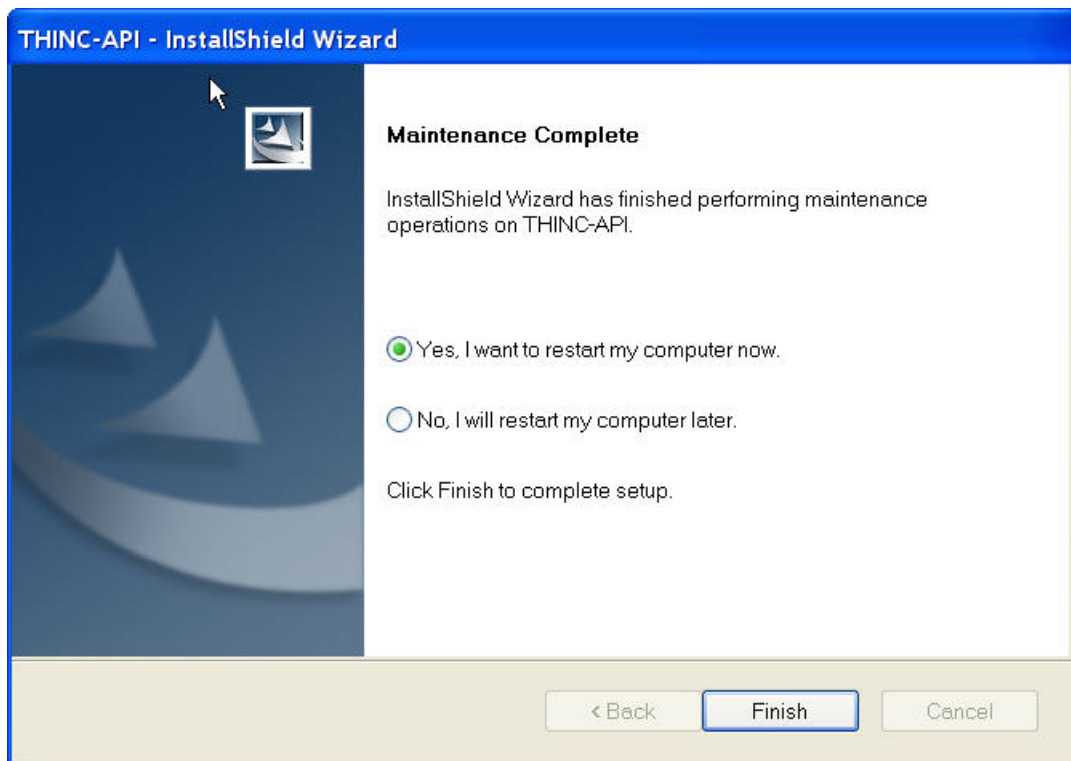

5.1.1.2 Setup

At any time, you can press Cancel button to terminate the installation.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

5.1.1.3 Finish

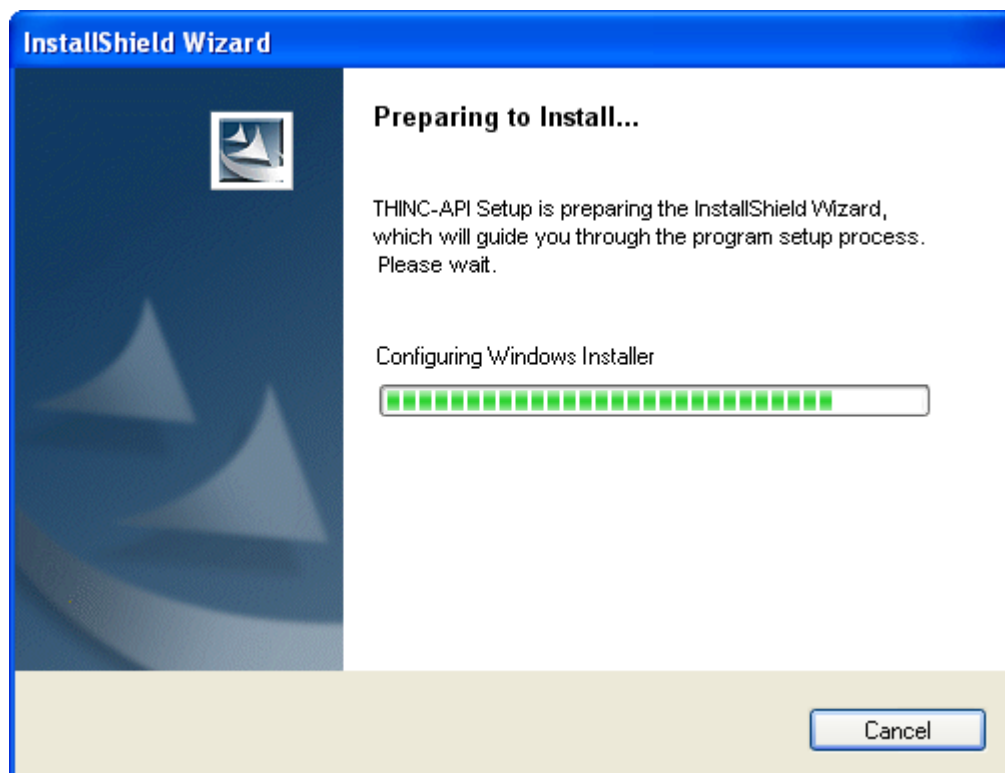

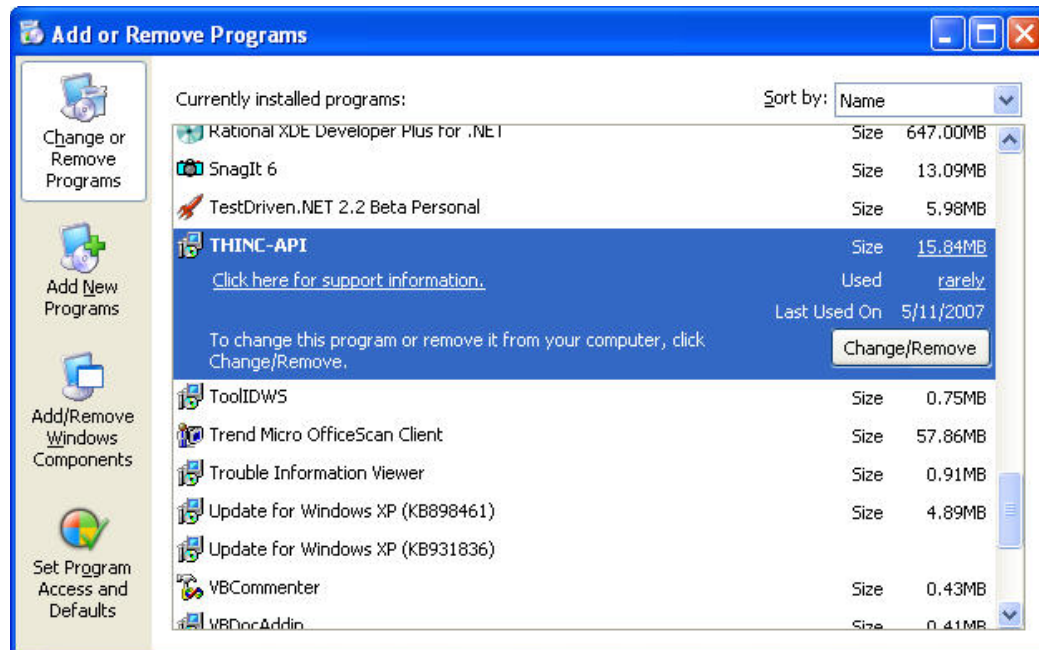

Click Finish to just finish the installation process.

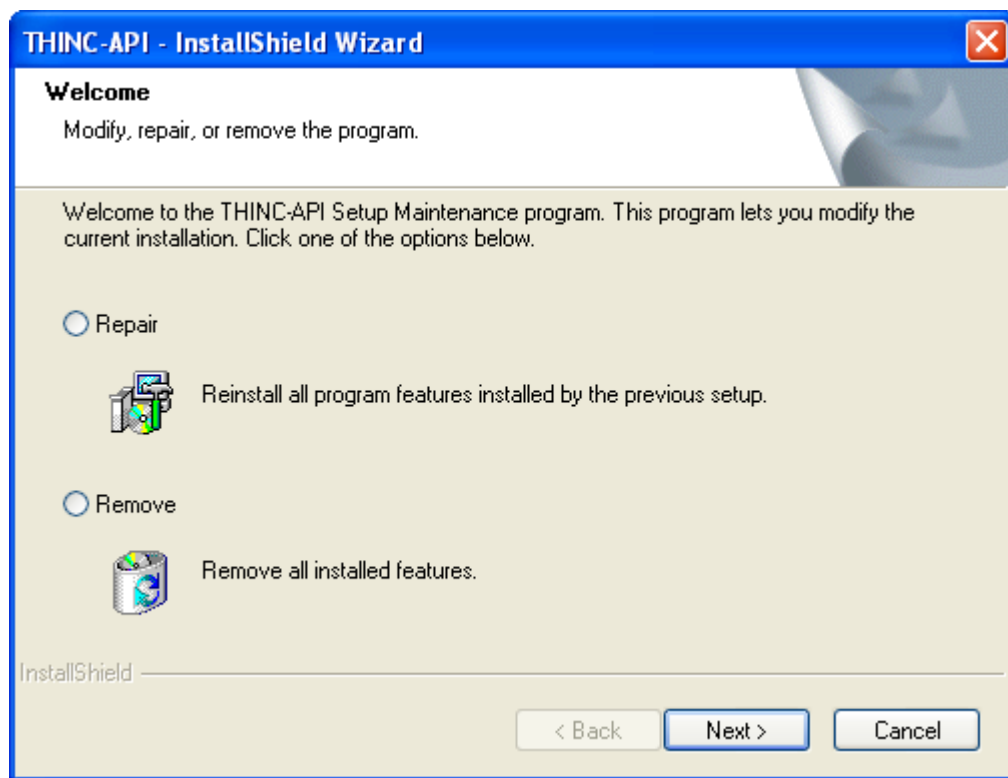

5.1.2 Uninstall

5.1.2.1 Run setup

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

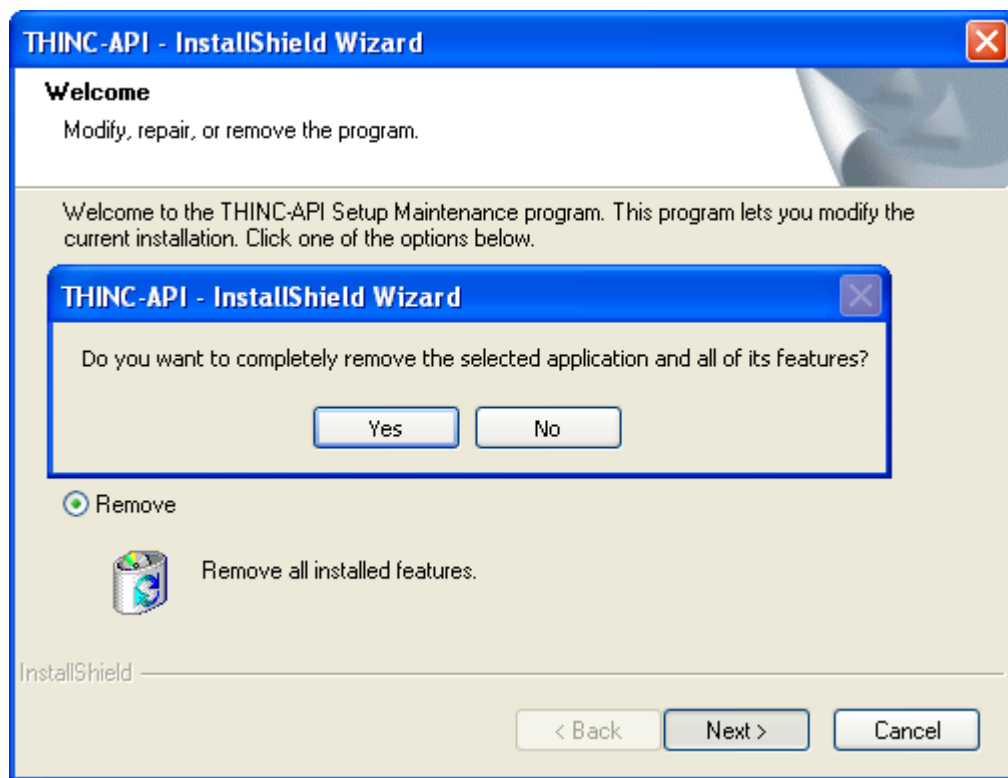

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Select 'Remove' and press Next.

The installation will ask for your confirmation to remove current THINC-API installation.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Click Yes to continue with the installation process or click No to review/change any settings.

5.1.2.2 Setup Status

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

At any time, you can press Cancel button to terminate the installation.

5.1.2.3 Finish

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Click Finish to just finish the installation process.

6. Installation Files

The following files are considered *THINC-API libraries* which are included in the subfolder *program files\Okuma\THINC API\Bin*:

- Okuma.CLDATAPI.dll
- Okuma.CLCMDAPI.dll
- Okuma.CLDATAPI.xml (Visual Studio Brower Help files)
- Okuma.CLCMDAPI.xml (Visual Studio Brower Help files)

- Okuma.CMDATAPI.dll
- Okuma.CMCMDAPI.dll
- Okuma.CMDATAPI.xml (Visual Studio Brower Help files)
- Okuma.CMCMDAPI.xml (Visual Studio Brower Help files)

- Okuma.CGDATAPI.dll
- Okuma.CGCMDAPI.dll
- Okuma.CGDATAPI.xml (Visual Studio Brower Help files)
- Okuma.CGCMDAPI.xml (Visual Studio Brower Help files)

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

6.1 Machine Installation

6.1.1 *Lathe*

6.1.1.1 GAC Folder

THINC-API libraries:

- Okuma.CLDATAPI.dll
- Okuma.CLCMDAPI.dll

Logging Service library:

- Okuma.ApiLog2.dll
- Okuma.Api.LogService.dll
- Okuma.Api.LogService.Data.dll

Dependency library files for THINC-API:

- Okuma.Interop.LCMDAPI.dll

6.1.1.2 Okuma Folders

THINC-API Release notes:

D:\Program files\Okuma\THINC API \ LatheReleaseNote.pdf

THINC-API Installation Manual:

- Okuma.CGCMDDAPI.xml (Visual Studio Brower Help files)

Logging Service folder:

D:\Program Files\Okuma\LoggingService2

- ApiLog2
- Okuma.Api.LogService.dll
- Okuma.Api.LogService.WinHost.exe
- Okuma.Api.LogService.WinHost.exe.config
- System.DataSQLite.dll

6.2 Desktop Installation

All 3 libraries for Lathe, Machining Center, and Grinder can be installed when desktop installation is detected. The installation will consider desktop installation when there is no OSP-P folder on C drive.

All libraries and applications will be installed for each selection of machine types.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

7. Installation for Custom Application

This section describes the process of installing custom applications developed with THINC API libraries. This process allows custom applications developed with any version of THINC-API to run on machine without affecting other custom applications running with different versions of THINC-API libraries.

In order for a custom application to run on machine, the following steps need to be done as listed below:

7.1 THINC-API Spec. Code

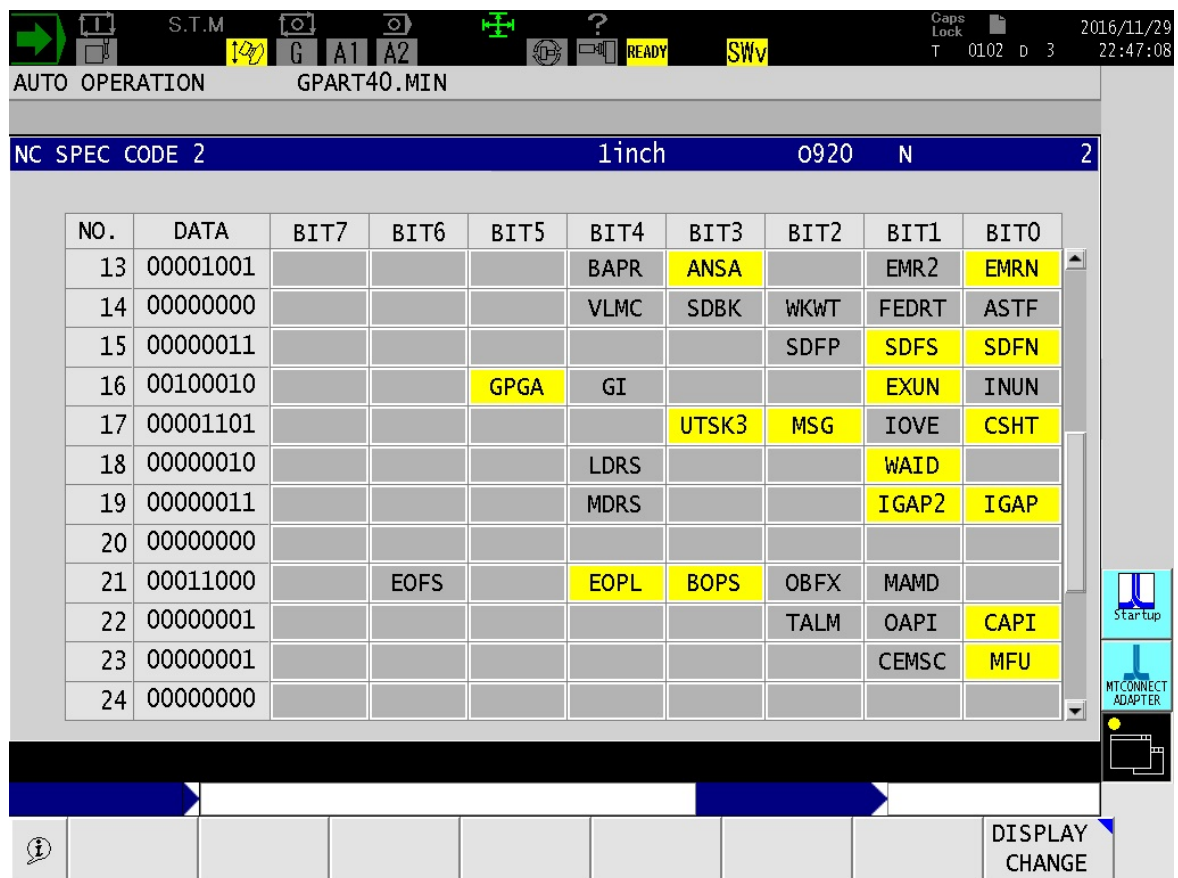

In order for THINC-API to function, a spec. code for THINC-API must be enabled on the machine. To enable THINC-API, it must be requested through distributor or Okuma Software Group. Currently, this process is done by installing the OSP System Software on the machine.

On Machining Center, THINC-API spec. code, **CAPI on No 32**, can be verified visually on the NC HMI screen as shown below:

NO.	DATA	BIN	HEX	BIT7	BIT6	BIT5	BIT4	BIT3	BIT2	BIT1	BIT0
21	00001011	0B	TPRB	TSNS	ATRT	DRME	DNCE	PRNT	TLLF	TLCH	
22	11101010	EA	CV10	CV2	DNT1		DNT3		DNDT	OHSP	
23	00000000	00	YAEC	NSRC	2TOF	DYNZ	DYNY	DYNX	ITPG	TRNC	
24	00000000	00	MSB7	MSB6	MSB5	MSB4	MSB3	MSB2	MSB1	MSB0	
25	11100000	E0	LSVP	MOPB	LNRP			SHNC	NBS	SHSI	
26	10000011	83	TWRC	STRC	PHDG	MSKP	SATM	SAMS	MNMS	SPAE	
27	01000001	41	ANCR	EXIO	PHAR		SRAC	NACF		SYTP	
28	10101001	A9	CLM	Z100	G68S	CLDC	CHMF	BITL		PB12	
29	00001000	08	PHD6	PHD5	PHD4	THSB	Z200	F1FD	IGFD	THCM	
30	00100010	22	FSPB	DPDI	NRSP	TNDM	WIOP	NTHC	HELP	PHD7	
31	11000000	C0	OACS	EXMC	IGFA	2SLT	MSUS	PE10	PER5		
32	10000101	85	NOPN				BRLT	CAPI		KKMN	

On Grinder, THINC-API spec. code, **CAPI on No 22 bit 0**, can be verified visually on the NC HMI screen as shown below:

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

Note: There is no NC-HMI screen for verifying spec code on Lathe machine.

7.2 License

All *THINC-API libraries* require a valid license file to run on machine. There is only a single license file, Okuma.api.lic, for all THINC-API libraries version. The setup itself includes a time-out version of license file and is installed in D:\Program Files\Okuma\Licenses folder. Your custom application or demo application can be run in this trial period.

Currently, the trial period is fixed to certain date in the license file.

For example:

This license file will be expired in Oct 1, 2008 for Okuma.CLDATAPI.All version 1.2. This license file can be used on any machine.

```
FEATURE Okuma.CLDATAPI.All okumausa 1.2 01-oct-2008 uncounted \
HOSTID=ANY TS_OK SIGN="00EB B55A 56DD A45F 75D6 F491 231F CD00 \
2BA2 A406 AE0F 932B C574 7230 959C"
```

```
FEATURE Okuma.CMDATAPI.All okumausa 1.2 01-oct-2008 uncounted \

DB00 A98 F8BE 5366 B02E 10E4 1220 2FCF"

This license file is for machine having serial number 105330 only. It will not work on other machines having different serial number. It will support Okuma.CLDATAPI.dll library having a version that equals to or less than 1.1, and so for. This license file can support function calls for P200 or newer control types.

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

7.3 Installation

As normal case for all Windows installation program, THINC-API Setup will run through the installation if:

- THINC-API is not installed on the target machine.
- If existing version of THINC-API on machine is less than the installing version

For custom application developed with THINC-API:

- All and **ONLY** [THINC-API libraries](#) referenced by your application such as Okuma.CLDATAPI.dll, Okuma.COMDATAPI.dll, and Okuma.CGATAPI.dll must be included in your setup and installed in the same folder of your custom application.
- The libraries version referenced in your application must match (exact match since this library is signed with strong name) the libraries installed in your application folder.
- The THINC-API license file, Okuma.api.lic, installed on machine must support the THINC-API libraries version that your application are compiled with.

For example:

The machine has installed THINC-API and the version of Okuma.CLDATAPI is 1.1 as shown below

```
FEATURE Okuma.CLDATAPI.All okumausa 1.1 permanent uncounted \
HOSTID=SERIAL=105330 TS_OK SIGN="00C3 4CCD E2DB 439D 0F83 4805 \
9C14 DF00 291B D46A 71BD A96A 61A0 5A54 D18B"
```

Your custom application is compiled with Okuma.CLDATAPI version 1.2. In this case, the customer needs to obtain the latest THINC-API release and install on the machine.

For all cases, the latest release of THINC-API will cover all custom applications running on the machine and compiled with different version of THINC-API. The latest release of THINC-API always has the latest version of THINC-API libraries and the license file supports latest THINC-API libraries versions, also.

In all cases, the following files must not be included with the installation of custom applications developed with THINC-API libraries:

- ***LCMDAPI.exe***
- ***MCDMAPI.exe***
- ***GCMDAPI.exe***

7.4 Public Release

All custom applications developed with THINC-API must use the public release 1.0.0.0 or above. Any version before public release version will have compatibility issues with public release version and will not run correctly.

7.5 Best Practice

An application should verify all dependency libraries during run-time and encourages using the latest version of THINC-API release if possible. A re-compile of your application is a must to leverage new version of THINC-API features or bugs/defects fixes.

An application must install .NET framework version that it is compiled with.

The installation process comprises 2 steps:

1. Install THINC-API (.NET Framework 1.1/4.0 will also be installed if needed)
2. Install custom application (requires installing .NET Framework that application compiled with. It could be .NET Framework version 2.0, 3.0, and so on)

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

3. All exceptions generated by API and all set/add/cal functions will be logged. Therefore, the application must be designed to minimize unnecessary log by utilizing Object-Oriented Programming practices or preventing perform set/add/cal functions in a loop.

Example of bad practice:

```

Dim m_objTools As CTools
Dim intValue As Integer

m_objTools = New CTools

...

Private Sub UpdateThread()

While (blnRunning)
    m_objTools.SetSubSystem(SubSystemEnum: NC_AL)
    intValue = m_objTools.GetCurrentToolNumber ()
    .
    .
    m_objTools.SetSubSystem(SubSystemEnum: NC_BL)
    intValue = m_objTools.GetCurrentToolNumber ()
    .
    .
End While
End Sub

```

Example of good practice:

```

Dim m_objATurretTools As CTools
Dim m_objBTurretTools As CTools
Dim intValue As Integer

m_objATurretTools = New CTools
m_objATurretTools .SetSubSystem(SubSystemEnum: NC_AL)

m_objBTurretTools = New CTools
m_objBTurretTools .SetSubSystem(SubSystemEnum: NC_BL)

...

Private Sub UpdateThread()

While (blnRunning)
    intValue = m_objATurretTools . GetCurrentToolNumber ()
    .
    .
    intValue = m_objBTurretTools. GetCurrentToolNumber ()
    .
    .
End While

```

THINC-API	Version: S5015-007-11
Installation Manual	Date: 01/09/2019

End Sub

All custom applications also need to install into D:\Program Files folder only.
